

Lesson 7.00 — Test Review & Reteach

N.B. THIS LESSON IS OPTIONAL (See below for details.)

Overview

Objectives — *Students will be able to...*

- **Re-learn or strengthen** content knowledge and skills from Unit 6.

Assessments — *Students will...*

- **Re-submit** test answers with updated corrections for partial or full credit
 - Credit depends on instructor preference

Homework — *Students will...*

- **Read** BJP 13.1 up to “Sorting.”
- **Correct** any incorrect test answers by re-answering on a separate sheet of paper
 - To get back credit, they must justify their new answers
 - Staple new answer sheet to old test and turn in tomorrow

Materials & Prep

- **Projector and computer**
- **Whiteboard and markers**
- **Corrected student tests**
- **Student grades** (posted online, emailed to students, or handed back on paper in class)
- **Digital copy of test questions** for projector

To accommodate for late-year scheduling drift, Unit 7 is planned with 4 periods of “wiggle room.” Unit 7 includes a long-format lab that takes a minimum of 11 55-minute class periods to complete. **If you feel that you need to plan additional time for students to complete the Elevens lab, skip this review lesson, and assign test review and correction as a homework assignment.** Allow students to work together on the assignment so they can help each other with correcting answers. It is a good idea to check with each group before they leave class to ensure that they have A) exchanged contact information, B) have set up a location and time to do the assignment together.

The rest of the homework assignments can be shifted accordingly, since there are fewer homework assignments than there are days of the Elevens lab (see LP 7.3 for homework schedule).

Pacing Guide

Section	Total Time
Bell-work and attendance	5min
Class discussion (if needed)	10min
Test review and reteach	35min
Check student notes and return tests	5min

Procedure

Return student grades before class begins or while students are completing the bellwork.

Do not return students’ tests before the review session, since you want to motivate students to pay attention to the entire review, taking supplemental notes the entire time.

Bell-work and Attendance [5 minutes]

Class Discussion (if needed) [10 minutes]

1. If grades are low, invite the class to a discussion of what can be improved. Begin with student complaints and suggestions to build student buy-in. Ask students:
 - how they felt they were going to do before the test
 - what surprised them once they were taking the test
 - what they felt worked in the first unit (lessons, review strategies, assignments)
 - what do they think they want to change for the second unit
2. Once you feel that a dialogue has been established, validate students' feelings, then challenge them (*e.g.* AP courses are stressful, but this is good practice for college, where the pace is faster and professors don't give personalized instruction).

Test Review and Reteach [30 minutes]

1. Walk the students through each question on the test, glossing over questions that everyone answered correctly.
 1. You can ask for students to volunteer answers, or call on students randomly. Make sure that students explain their logic when they answer. If a student gives an incorrect answer, the explanation will tell you what you need to re-teach or clarify.
 2. Do not skip questions that everyone answered correctly, but do not spend more than the time it takes to read the question, and congratulate students' correct answers.
2. Project a copy of each question as you review—this will help students recall the question/process the information.
3. Make sure that students are taking notes during the re-teach, reminding students that for homework, they will have an opportunity to win back some of the points on their exam.
4. For Section II questions, select a sample of student work (with any identifying information obscured), and work through the answer together as a class.

Check student notes and return tests [5 minutes]

At the end of class, check student notes, and return the tests in hard copy form if applicable.

Accommodation and Differentiation

Encourage advanced students to take on additional programming challenges. One easy way to do this is to assign Programming Projects from the blue pages at the end of each Chapter.

If you have a few students that are struggling with the class, choose these students to create your classroom posters after school or for extra credit.
